

Class Reflection

The skills I learned in this class somewhat helped me pass my intermediate Hacker rank test. The reason it somewhat helped me is because I knew a lot of Java Script prior to this class. A lot of what was in the course I saw on the exam. From simple variable defloration, creating functions that set and return a value. Prior class experience also helped me pass this exam as well. What really helped me pass the Hacker Rank test was the practice that this class gave. I knew Java Script, but I was rusty at it. So, this class gave me the opportunity to practice my Java Script when I was doing the assignments. This class is going to help me a lot for senior project since we are thinking about making a web application. I can apply what I learned in this class in senior project.
